

Kika Integration Guide

Need the following 2 steps to integrate kika into build.

1. Add libkika library to external dir
 - Lib, header, dict and makefile from kika need to be synced to this path
`external/libkika`
 - Properly, it includes these files under this dir.
`Android.mk kika.mk dict iqqilib.h libIQQILib.so`

Note: Make sure `Android.mk` and `kika.mk` is included.

2. Enable Kika engine for gecko build and include dict from kika
 - In `/device/qcom/msm8909_512/msm8909_512.mk` add this line
`# Enable Kika IQQI IME engine`
`GECKO_CONFIGURE_ARGS += --enable-kika-qqi`
`# Include Kika dictionary`
`-include external/libkika/kika.mk`
